Mrs Hunt/man/SAFOICC/72842/6 Aug 65

AUG - 9 1965

Dear Miss [REDACTED]:

This is in reply to your letter reporting an aerial object which you observed on the night of 27 June 1965.

At 10:03 EST on this date, Echo I was visible in your area moving northeast at 70 degrees elevation. This was the object you sighted if your report was given in Daylight Saving Time, instead of Eastern Standard Time. If the time you reported was Eastern Standard Time, then another satellite of the same or of a higher magnitude was the probable cause of your sighting.

Sincerely,

JOHN P. SPAULDING
Lt Colonel, USAF
Chief, Civil Branch
Community Relations Division

Hq USAF SAFOICC (Mrs Hunt)
Wash D.C. 20330

Reference the attached letter from [redacted] reporting
an unidentified object which she observed on the night of
27 June 1965.

ECHO I, at 2203 EST, was North of the City, moving
NE at 70 degrees elevation. Her sighting is ECHO I if the
time given was EST and not Daylight Savings Time. However,
if the time given was DST then another satellite of the same
or of higher magnitude was the cause of her sighting.

As satellites pass into the earth's shadow they are no
longer visible which would cause a sudden disappearance of the
satellite.

Sirs

On Sunday, June 27, at approx. 10 o'clock p.m. I saw a starlike object suddenly move steadily across a small span of sky west to east over the Landover Hills, Md. area. In ten to fifteen seconds it stopped, and I could not find it again.

I dismissed it at the time and hoped to hear a report in the news on Monday since there are many radar stations in the Washington area and if it was a foreign object it would ~~be~~ surely be detected. So I just figured it was a star or satellite.

But later on during the week I was excited to hear about a similar object passing over Antarctica ^(going east with a sudden suspension). Could the two ^{movements} be the same?

Sorry I didn't notify you sooner.
